

CONCRETE

Where can it be used ?

Generally speaking: anywhere conventional concrete might be used.

Such as:

- Footpaths, roadways and driveways
- Pool surrounds
- Patios and entertainment areas
- External and internal floors
- Urban streetscapes and public areas

DISCLAIMER AND IMPORTANT INFORMATION:

The “Exposed Concrete” range of products are designed with the maximum volume of aggregate to provide the best possible Exposed finish. The placement of these products via a concrete pump is not recommended. Check with your Contractor as to how they will be placing the concrete. The Concrete Supplier cannot guarantee pumpability of these products.

The Concrete Supplier will not be responsible for poor onsite preparations, poor placement techniques, or the use of sugar as a surface retardant. These problems must be taken up with your Concrete Placer.

During the final finishing process, pressurised water is used to wash off the top surface paste from the concrete. Proper steps to capture this product must be put in place by the Concrete Placer. The Concrete Supplier will not be responsible should this water enter into the drainage system or waterways.

There are likely to be variations in consistency of colours and textures, appearance and quality in the finished product of the hardened concrete, as the raw ingredients are natural and subject to variations beyond our control. Furthermore, the nature of natural quarried materials is that variation is inevitable over the life of the quarry and some materials may contain traces of naturally occurring iron which can lead to stains developing on the surface of the finished concrete some time after construction is complete.

The concrete samples shown are indicative only of the finished concrete product, and no guarantee of the colours or textures of the product is given or implied by this brochure. Whilst reasonable care has been taken in the preparation of this document, reproductive processes will alter the actual appearance of the products to varying degrees.

For a closer representation of the concrete samples displayed, please call into our display centre.

Can't see what you're looking for?

Don't despair!

We can make you a sample panel in accordance with your exacting requirements.

Please enquire with our Office or friendly Sales Staff.

The possibilities are endless!

EXPOSED

What is Exposed Aggregate ?

“Exposed Aggregate” refers to a very popular and attractive concrete finish. After placement of the concrete, the top few millimetres of concrete paste are removed from the surface in order to reveal the stone (called: aggregate) embedded within. A sealer is applied to enhance and protect the finished product.

Below the surface is a world of beautiful finishes waiting to be Exposed
