

CONCRETE

Where can it be used ?

Generally speaking, most common application are internal floors where the low maintenance benefits of a high polish is desirable such as: lounge, dining, kitchens, bath & bed rooms. However, external floors are possible too. Though some consideration needs to be given to ensure the finished texture is non-slip.

DISCLAIMER AND IMPORTANT INFORMATION:

The "Polished Concrete" range of products are designed with the maximum volume of aggregate to provide the best possible Polished finish. The placement of these products via a concrete pump is not recommended. Check with your Contractor as to how they will be placing the concrete. The Concrete Supplier cannot guarantee pumpability of these products.

The Concrete Supplier will not be responsible for poor onsite preparations, poor placement techniques, colour variation and variability of stone distribution. related to placement and curing techniques.

An inherent property of all concrete is that shrinkage will occur as a result of chemical and physical loss of water. Such shrinkage induces stress which can result in cracking. Design and construction methods are required to mitigate and reduce the possibility of uncontrolled cracking.

There are likely to be variations in consistency of colours and textures, appearance and quality in the finished product of the hardened concrete, as the raw ingredients are natural and subject to variations beyond our control. Furthermore, the nature of natural quarried materials is that variation is inevitable over the life of the quarry and some materials may contain traces of naturally occurring iron which can lead to stains developing on the surface of the finished concrete some time after construction is complete.

The concrete samples shown are indicative only of the finished concrete product, and no guarantee of the colours or textures of the product is given or implied by this brochure. Whilst reasonable care has been taken in the preparation of this document, reproductive processes will alter the actual appearance of the products to varying degrees.

For a closer representation of the concrete samples displayed, please call into our display centre.

Can't see what you're looking for?
Don't despair!
We can make you a sample panel in accordance with your exacting requirements.
Please enquire with our Office or friendly Sales Staff.
The possibilities are endless!

POLISHED

What is Polished Concrete?

"Polished Concrete" refers to a very popular and durable finish that resembles polished stone. Polished Concrete is achieved by grinding away the top few millimetres of the surface to reveal the internal matrix. Progressively finer grades of cutting and polishing are undertaken to achieve the final finish.

Below the surface is a world of beautiful finishes waiting to be Polished
