STONE CHARACTERISTICS OUTSIDE PHOTO RANGE MAY VARY

There are likely to be variations in consistency of colours and textures, appearance and quality in the finished product of the hardened concrete, as the raw ingredients are natural and subject to variations beyond our control. Whilst every effort has been made to match the colours in the preparation of this document, reproductive processes will alter the actual appearance in the concrete products to varying degrees.

The concrete samples shown are indicative only of the finished concrete product, and no guarantee of the colours or textures of the product is given or implied by this document.

PRODUCT NAME:

## BEACH BLACK

A nice contrast is created when large white/orange pebble is set in a dark black pigment base. Try Africanus Black for a cleaner white look.

### Things you should know

The large size of this pebble helps to create a large paste gap between the pebbles. This helps bring the base colour to greater prominence.

The colour of the pebble is mostly white, but significant yellow and orange is visible and adds a beige hue to the charcoal tones.

If you prefer less yellow/orange then have a look at Africanus Black.

SPECIFICATION:

Vic Mix Beach Black 25MPa  
Exposed Aggregate Concrete

ORDER CODE:

X\_BCHBK
