PRODUCT NAME:

GRANFEL ASH

This product is all about grey.
Blended grey granite set in an ash
base.

Things you should know

The grey granite we use is a complex conglomerate of micro minerals containing quartz, feldspar and shiny mica flecks. This complexity is part of its appeal.

The quarry from which the granite is derived also contains outcrops of a darker mineral called hornfels (which can be categorised as bluestone). This occurs naturally and appears as a fleck of dark grey to black particles in the product.

Always check availability of this product before committing it to your next project.

SPECIFICATION:

Vic Mix Granfel Ash 25MPa
Exposed Aggregate Concrete

ORDER CODE:

X_GRFAS

REVISION: 28/12/2015

There are likely to be variations in consistency of colours and textures, appearance and quality in the finished product of the hardened concrete, as the raw ingredients are natural and subject to variations beyond our control. Whilst every effort has been made to match the colours in the preparation of this document, reproductive processes will alter the actual appearance in the concrete products to varying degrees.

The concrete samples shown are indicative only of the finished concrete product, and no guarantee of the colours or textures of the product is given or implied by this document.
