STONE CHARACTERISTICS OUTSIDE PHOTO RANGE MAY VARY

There are likely to be variations in consistency of colours and textures, appearance and quality in the finished product of the hardened concrete, as the raw ingredients are natural and subject to variations beyond our control. Whilst every effort has been made to match the colours in the preparation of this document, reproductive processes will alter the actual appearance in the concrete products to varying degrees.

The concrete samples shown are indicative only of the finished concrete product, and no guarantee of the colours or textures of the product is given or implied by this document.

PRODUCT NAME:

BROADPEAK ASH Abrasive Blasted

Basaltic bluestone set in an a grey cement and sand base.

Things you should know

The bluestone used in this product is sourced from a major high production hard rock quarry within the greater Melbourne area. The visual nature of the stone varies from time to time and is not a controllable aspect of the product. The variation takes the form of brown coloured particles deviating away from the predominantly black ones.

Abrasive Blasted surfaces offer a gentler texture over conventional Exposed Aggregate. The tactile experience is best described as irregular and smooth. Bare feet will love the touch of this finish.

SPECIFICATION:

Vic Mix Broad Peak Ash
25MPa Abrasive Blasted
Concrete

ORDER CODE:

X_BROAS
